AI/ML engineer, graduating May 2027. I build and evaluate LLM agents: multi-agent systems, evaluation harnesses scored against expert decisions, and safe model access. Python, PyTorch, LLM evals.

Education

B.Tech, Computer Science and Engineering (AI & Machine Learning) 2023 – May 2027
KG Reddy College of Engineering and Technology, Hyderabad CGPA **9.44/10**
Coursework: Machine Learning, Deep Learning, Data Structures and Algorithms, Statistics and Probability, DBMS

Experience

AI Intern, Mondee Tech Pvt. Ltd. (travel technology) Aug 2026 – Present

- Built evaluation for LLM agents against expert reviewers' decisions, with every run tagged by code version; shipped new logic report-only first, with shadow comparison against the previous agent. In a replay of 365 real refunds, cut a refund-audit agent's false alarms on desk-approved refunds from **22% to 10%** (13 to 6 of 59).
- Co-designed with my team lead a multi-agent system for disputing airline debit memos (charges airlines raise against travel agencies): one agent reconstructs the airline's arithmetic, one argues our side, and a judge rules line by line, with code verifying every citation and sum. It became the team's v2 design. In my team lead's evaluation, our proof of concept raised accuracy from a **20% baseline to 67%**.
- Built an LLM client that redacts customer identifiers before any model call and refuses to send if any survive, running an open-weight model first with a hosted fallback; agents call internal tools through typed contracts.
- Built the production review console for the desk (Next.js/TypeScript, test-first, **578** tests) and cut page loads from about **12 s to 3 s**.

Developer Intern, Lakshya Smart Guard Systems Jun 2026 – Jul 2026

- Built drone-monitoring dashboards (React.js, Python, REST APIs) and integrated AI analytics into the data workflows.

Tech Lead Intern, Swecha Telangana Jul 2025 – Sep 2025

- Led an 8-member team that curated and validated **50,000+** Telugu text samples for Indic LLM research; set the annotation standards and mentored contributors.

Projects

W-SENTRY: cross-dataset evaluation of intrusion detectors (team of four) github.com/Riteesh-2k6/w-sentry

- Compared Random Forest, XGBoost, a CNN-BiLSTM-attention model and a domain-adversarial network (the last two in PyTorch; the last trained on two of the datasets) on three wireless and IoT intrusion datasets (WSN-DS, CICIoT2023, Edge-IIoTset) mapped to a shared five-class taxonomy, and tested Random Forest and the CNN-BiLSTM model on all nine train/test dataset pairs. Same-dataset accuracy reached **91.9–99.6%**, but every Random Forest cross-dataset score fell below always predicting the most common class. All results are single runs; our paper in preparation argues that transfer claims need matched scoring, per-class metrics and repeated runs.

BeyondML: agent harness for ML projects github.com/Riteesh-2k6/beyondml

- Grew my AutoML platform into an agent harness on Google ADK: a planner turns a dataset and a goal into steps, one agent per step (audit, cleaning, EDA, features, model search, evaluation) works through typed tools, and a genetic algorithm tunes hyperparameters.

DeepHire: AI mock-interview platform

- Adaptive mock interviews with LLM-based answer evaluation (Groq inference), role-specific questions and downloadable feedback reports.

Publication

Feature-Based Approach for Identifying AI-Generated Text (first author) IEEE CCIC 2026

- Hybrid detector that fuses linguistic and statistical features with contrastive-trained DistilBERT embeddings through attention. **96% accuracy, F1 0.96** on a held-out test split of the Kaggle AI-vs-Human text dataset, ahead of fine-tuned DistilBERT (92%) and RoBERTa (94%).

Skills

AI/ML: LLM agents, tool use, structured outputs, evals, RAG, Google ADK, MCP, NLP, PyTorch, Hugging Face Transformers, scikit-learn, pandas, NumPy
Languages: Python, TypeScript/JavaScript, SQL, Java, C++
Backend and web: FastAPI, Flask, Django, React.js, Next.js
Tools: Git, Docker, Linux, PostgreSQL, MongoDB, MySQL
Statistics and plots: regression, significance testing, confidence intervals, mixed-effects models, matplotlib, seaborn, plotly
